

### Team Plan:

When working on the project, we looked at the different stages and decided to tackle it based on the functions that we had to write. Almost the entire time, both team members collaboratively figured out how to write the functions and how the project will work, sharing ideas and discussing the PDF thoroughly. Most of the work was done while the team members were together.

Shamma worked mainly on the Walk, Run, getInstances, Reproduce and created the different Critter subclasses.

Allen worked on writing the main inputs, makeCriticter, displayWorld, and writing the fight function.

However, both team members worked together to figure out how to write the different functions. For example, for the fight part Shamma and Allen sat and talked about the different issues they would have, but Allen ultimately wrote that portion of the code.
